

Listing of the Claims

1-39. (canceled)

40. (previously presented) A computerized meridian linking and balancing system comprising:

    a computer and computer system for:

        measuring electrical signals at multiple meridian points on the surface of a human body;

        comparing and mapping the multiple signals to form meridian network;

        measuring other meridian points that are typically stable to establish a stable reference point; and

        comparing the stable reference point measurements to measurements from points on the meridian network to determine variances.
